Chalfont Borough Water Department
Chalfont, Bucks County, Pennsylvania

Dear Mr. Ham:

With respect to the subject site, HALLIBURTON NUS has contacted the Norristown District of the Pennsylvania Department of Environmental Resources (PA DER) to identify relevant background information regarding the subject site. PA DER referred our questions to the Bucks County Health Department.

According to Everett Hogue, of the Bucks County Health Department, low concentrations of trichloroethylene (≤ 1.0 ug/l) and tetrachloroethylene (≤ 14 ug/l) were detected in one of the Chalfont Borough Water Department (CBWD) wells (well 8-A) in 1979. In 1989 and again in 1992, the borough implemented self-monitoring in accordance with the Pennsylvania Safe Drinking Water Act requirements. The monitoring events included sampling and analysis for volatile organic compounds (VOCs). According to Mr. Hogue, no VOC contamination was detected in either 1989 or 1992.

Because no VOC contamination has been indicated, the health department has not implemented further actions to identify potential sources of contamination.

If you have any questions, please feel free to call.

Respectfully,
